DETAILED ACTION

Double Patenting

1. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain <u>a</u> patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer <u>cannot</u> overcome a double patenting rejection based upon 35 U.S.C. 101.

- 1. Claims 21 and 22 are provisionally rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 21 and 22 of copending Application No. 10/031,426.

 This is a <u>provisional</u> double patenting rejection since the conflicting claims have not in fact been patented.
- 2. It should be noted that Examiner indicated claims 21 and 22 to be allowable in parent case 10/031,426 but upon further reconsideration has rejected claims 21 and 22 based on EP 943696.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/654,775

Art Unit: 1742

4. Claims 21 and 22 rejected under 35 U.S.C. 103(a) as being unpatentable over European patent 943696 cited by applicant in IDS dated July 8, 2004.

Page 3

- 5. EP'696 in paragraph 17 discloses a cold rolled steel sheet having a composition with alloying constituents whose wt% ranges overlap those recited by the claimed; such overlap renders applicant's composition prima facie obvious because it would have be obvious to one of ordinary skill in the art to select the claimed ranges from the broader disclosure of the prior art because the prior art has similar properties of high temperature strength, toughness, bake hardening and drawability.
- 6. Moreover, similar to present invention, EP696 in paragraph 20 discloses a ferrite phase having a mean grain size of not larger than 10 microns, and in paragraph 60 discloses a solute (dissolved) N of 0.0015 to 0.01% which is within the claimed dissolved N range of 0.001% or more. Even though prior art does not teach a martensite phase at an area ratio of 2% or more or the r value of 1.2 or more as recited by claim 21, such would be expected since composition and process limitations are closely met and in absence of proof to the contrary.
- 7. More specifically, note prior art specific alloy J in Tables 6 and 8 having a composition with N/AL of 0.3143 and a dissolved N content of 0.0055% which meets the recited claim except for a slightly higher amount of Al. It is the examiner's position, however, that it would obvious to use lower amounts of Al in the prior art alloy since a broad Al range of 0.001 to 0.150% is taught. Furthermore since applicant has not demonstrated (e.g. by comparative test data) the criticality of the claimed Al range of 0.02% or less, then it would seem that a composition with 0.02% vs a composition with

Application/Control Number: 10/654,775

Art Unit: 1742

slightly more (say 0.035%) Al would depict a mere difference in the proportion of element without any attendant unexpected results, which would not patentably distinguish claims over prior art.

8. In regard to claim 22, EP'696 contains 0.05 to 0.1% Ti.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Deborah Yee whose telephone number is 571-272-1253. The examiner can normally be reached on Monday-Friday from 6:00 to 2:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Roy King can be reached on 571-272-1244. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
